Customer Specific Requirements of IATF 16949

Photronics manufacture photomasks for the Semiconductor Industry. From the quality point of view the product photomask is classed as a tool. The mask is not a production part, service part and/or accessory part occur which is mechanically or electronically connected to the vehicle. That means Photronics is a Tooling & Equipment manufacturing supply organization. Therefore the certification to IATF 16949 is not possible. Photronics is certified to ISO 9001.

Photronics MZD used the audit of ISO 9001:2015 on November 24th 2017 to verify the specific customer requirements of IATF 16949:2016 which were implemented since 2003.

The audit report No: 70021710 of the certification body TÜV Management Service describes in paragraph 2: Photronics fulfill the customer specific requirements of IATF 16949, a certification is not possible.
